KEYS TO BUILD BUSINESS AGILITY

How to bring Agility into your organization and how to survive?

1

SCALABILITY

To deliver customer satisfaction, there is a need for a reliable value-delivery engine aligned with top business priorities, giving you fast and predictable implementation across the entire software development lifecycle. Waterfall teams are unable to deliver faster, as required by the enterprises these days.

2

PERFORMANCE

Bringing agility into your organization means sensing and adapting to change rapidly and confidently. Building responsiveness into your organization's DNA is important, in order to take a disciplined approach to managing change, for which business agility is critical. Delivery is the origin for bringing agility. Improving cycle time can significantly affect your end result. Agility helps in fulfilling customer requirements early and often, assuring that you are building the right products.

3

ADAPTIVE PLANNING

Funding and scope are two key factors that can allow your business to move and build responsiveness. Establishing a consistent planning speed can help enterprises decrease risk and increase investor confidence.

4

GROWTH

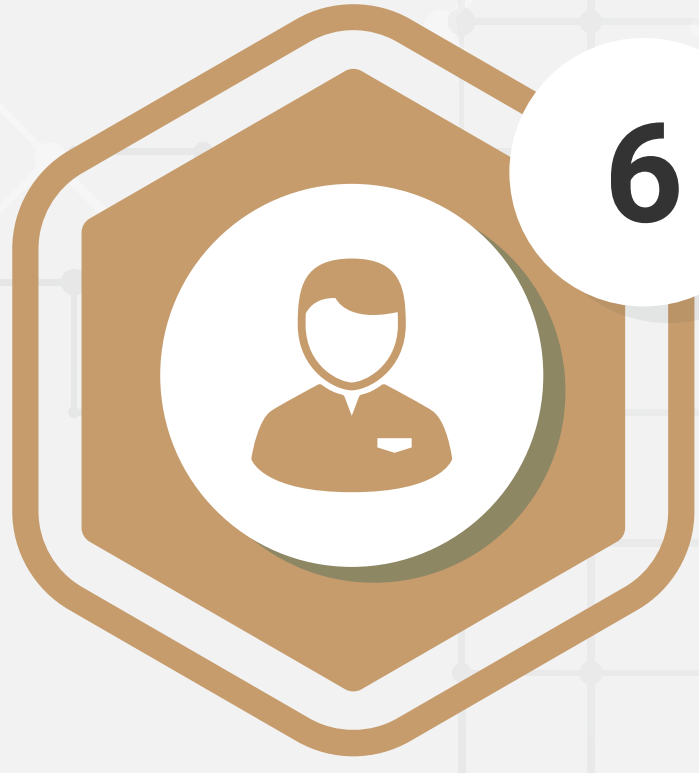

It is observed that most enterprises spend approximately 15% of their budget on innovation. However, highly effective organizations allocate at least 50% of their budget on growth initiatives. By increasing speed, productivity and quality, you can spend fewer resources on fixing bugs, technical debt and refactoring. Agility helps in making the right decisions with confidence.

5

BRING CHANGE

In order to nurture growth and innovation, it is important to follow a deliberate approach to investments in innovation. Business agility helps in connecting horizon investments and disciplined exploration with the principle of fail fast and fail cheap.

6

ORGANIZE AROUND CUSTOMER VALUE

In order to nurture growth and innovation, it is important to follow a deliberate approach to investments in innovation. Business agility helps in connecting horizon investments and disciplined exploration with the principle of fail fast and fail cheap.

CONCLUSION

Organizations with few teams to have mastered agile development are not truly realizing the benefits of business agility. In order to continue and succeed as an agile business, the organization must link execution work to business strategy, develop plans for inline scaling and comprehensive adaptive planning. TestingXperts can help you manage along value streams, instead of legacy systems, to reduce dependencies and allow for accurate, adaptive planning.
